Appl. No. 10/660,573 Atty. Docket: 0941-0841P

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A process for forming a metal damascene structure, comprising the following steps:

forming a dielectric layer overlying a first metal layer;

etching the dielectric layer to form a damascene opening and expose the first metal layer, wherein impurities are formed on the exposed first metal layer;

performing a plasma treatment on treating the exposed first metal layer using a plasma containing nitrogen and oxygen to remove the impurities thereon; and

filling a metal in the damascene opening.

- 2. (Currently Amended) The process as claimed in claim 1, wherein the plasma treatment uses a hydrogen containing plasma, a nitrogen containing plasma, an oxygen containing plasma, or mixtures thereof further contains hydrogen.
 - 3. (Cancelled).
 - 4. (Cancelled).

Office Action dated Oct. 5, 2004

Appl. No. 10/660,573 Atty. Docket: 0941-0841P

5. (Currently Amended) The process as claimed in elaim 2 claim 1, wherein the oxygen containing plasma is N_2O plasma or oxygen O_2 plasma.

- 6. (Cancelled).
- 7. (Original) The process as claimed in claim 1, wherein the damascene opening is a via.
- 8. (Original) The process as claimed in claim 7, wherein the damascene opening further comprises a trench above the via.
- 9. (Original) The process as claimed in claim 8, wherein the metal filling step includes filling copper or copper alloy in the trench and the via.
 - 10. (Cancelled).
- 11. (Previously Presented) The process as claimed in claim 1, wherein the first metal layer is copper or copper alloy.
 - 12-14. (Cancelled).

Office Action dated Oct. 5, 2004 Appl. No. 10/660,573

Atty. Docket: 0941-0841P

15. (Previously Presented) The process as claimed in claim 1, after the first metal layer is formed and before the dielectric layer is formed, further comprising forming a cap layer on the first metal layer.

- 16. (Original) The process as claimed in claim 15, wherein the cap layer is nitride or silicon carbide.
 - 17. (Cancelled).
- 18. (Currently Amended) A process for forming a metal damascene structure, comprising the following steps:

forming a cap layer on a first metal layer;

forming a dielectric layer on the cap layer;

etching the dielectric layer and the underlying cap layer with fluorine-containing plasma or chlorine-containing plasma to form a damascene opening and expose the first metal layer, wherein impurities are formed on the exposed first metal layer;

plasma treating the exposed first metal layer using a hydrogencontaining plasma containing nitrogen and oxygen to remove the impurities thereon; and

filling a metal in the damascene opening.

Atty. Docket: 0941-0841P

19. (Currently Amended) The process as claimed in claim 18, wherein the hydrogen containing plasma is hydrogen (H_2) plasma or ammonia (NH_3) plasma further contains hydrogen.

- 20. (Currently Amended) The process as claimed in claim 18, wherein the plasma treatment step uses H_2 plasma, NH_3 plasma, H_2/NH_3 plasma, or H_2/N_2 plasma is an N_2 O plasma.
- 21. (Original) The process as claimed in claim 18, wherein the damascene opening is a via.
- 22. (Original) The process as claimed in claim 21, wherein the damascene opening further comprises a trench above the via.
- 23. (Original) The process as claimed in claim 22, wherein the metal filling step includes filling copper or copper alloy in the trench and the via.
- 24. (Original) The process as claimed in claim 18, wherein the first metal layer is copper or copper alloy.
- 25. (Original) The process as claimed in claim 18, wherein the cap layer is nitride or silicon carbide.

Appl. No. 10/660,573 Atty. Docket: 0941-0841P

26.- 33. (Cancelled).

34. (Currently Amended) A process for forming a metal damascene structure, comprising the following steps:

forming a cap layer on a first metal layer;

forming a dielectric layer on the cap layer;

forming a photoresist pattern on the dielectric layer, wherein the photoresist pattern contains carbon;

etching the dielectric layer and the underlying cap layer using the photoresist pattern as a mask to form a damascene opening and expose the first metal layer, wherein impurities are formed on the exposed first metal layer;

plasma treating the exposed first metal layer using an oxygencontaining a plasma containing nitrogen and oxygen to remove the impurities thereon; and

filling a metal in the damascene opening.

35. (Original) The process as claimed in claim 34, wherein the etching step uses fluorine-containing plasma or chlorine-containing plasma.

Office Action dated Oct. 5, 2004 Appl. No. 10/660,573 Atty. Docket: 0941-0841P

36. (Currently Amended) The process as claimed in claim 34, wherein the oxygen containing plasma is an N_2O plasma or oxygen O_2 plasma.

- 37. (Original) The process as claimed in claim 34, wherein the damascene opening is a via.
 - 38. (Original) The process as claimed in claim 37, wherein the damascene opening further comprises a trench above the via.
 - 39. (Original) The process as claimed in claim 38, wherein the metal filling step includes filling copper or copper alloy in the trench and the via.
 - 40. (Original) The process as claimed in claim 34, wherein the cap layer is nitride or silicon carbide.
